Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to a control group (CG) and an exercise group (EG). The EG performed a 10-week training program consisting of three sessions per week. The CG performed no exercise. The HR and EE were measured at rest and during a 30-min submaximal exercise test at baseline and after 10 weeks. The EG showed a significant decrease in HR and an increase in EE compared to the CG. The results suggest that a 10-week training program can improve the cardiovascular fitness of sedentary, middle-aged women.

¹ In Russian, adjectives are inflected for gender, number, and case, agreeing with the nouns they modify. Masculine nouns are inflected for singular and plural, while feminine nouns are inflected for singular, dual, and plural. The Russian language is a highly inflected language, with many different forms for each word.

As the number of nodes in the network increases, the number of nodes that are not connected to any other nodes increases. This is because the number of nodes that are not connected to any other nodes is proportional to the number of nodes in the network. As the number of nodes in the network increases, the number of nodes that are not connected to any other nodes increases. This is because the number of nodes that are not connected to any other nodes is proportional to the number of nodes in the network.

Т.е. значение β как коэффициента корреляции между $\ln Y$ и $\ln X$ равно $\beta = \frac{\sigma_{\ln Y, \ln X}}{\sigma_{\ln X}^2}$. Следовательно, если $\ln Y$ и $\ln X$ коррелируют, то β будет отличаться от нуля. Если же $\ln Y$ и $\ln X$ не коррелируют, то β будет равно нулю. Таким образом, значение β показывает, насколько $\ln Y$ зависит от $\ln X$. Если β равно нулю, то $\ln Y$ не зависит от $\ln X$. Если β равно единице, то $\ln Y$ полностью зависит от $\ln X$. Если β равно -1 , то $\ln Y$ полностью зависит от $\ln X$ с обратным знаком.

2. The second step is to determine the appropriate sample size for the study. This is done by calculating the margin of error (ME) and the confidence interval (CI). The ME is the maximum difference between the sample mean and the population mean that is acceptable. The CI is the range of values within which the population mean is expected to fall. The sample size is determined by the ME, the CI, and the level of confidence.

1. **Uraian** : Penelitian ini bertujuan untuk mengetahui pengaruh penggunaan media pembelajaran berbasis teknologi terhadap hasil belajar siswa di kelas X IPS SMA Negeri 1 Kota Palembang. Penelitian ini menggunakan metode kuantitatif dengan desain penelitian kuasi eksperimen. Sampel penelitian adalah seluruh siswa kelas X IPS SMA Negeri 1 Kota Palembang. Instrumen penelitian adalah tes hasil belajar IPS. Teknik analisis data yang digunakan adalah uji-t. Hasil penelitian menunjukkan bahwa terdapat perbedaan yang signifikan antara hasil belajar siswa yang menggunakan media pembelajaran berbasis teknologi dengan hasil belajar siswa yang tidak menggunakan media pembelajaran berbasis teknologi. Hal ini menunjukkan bahwa penggunaan media pembelajaran berbasis teknologi dapat meningkatkan hasil belajar siswa.

2.1. *Thermodynamic stability* $\rightarrow$ ΔG $\rightarrow$ $\Delta G = \Delta H - T\Delta S$

1. *Chlorophyll a* and *b* were determined using a spectrophotometer (Shimadzu UV-1601) at 663 nm and 646 nm, respectively. The concentration of chlorophyll was calculated using the following formula: $\text{Chlorophyll } a = 12.7 \times \text{OD}_{663} - 2.13 \times \text{OD}_{646}$ and $\text{Chlorophyll } b = 21.6 \times \text{OD}_{646} - 5.1 \times \text{OD}_{663}$. The total chlorophyll concentration was calculated as the sum of chlorophyll *a* and *b*.

7) қарым-қатынас, бала қызығушылығын қамтамоға келтіру, білім беру және өзге де ұйымдармен ынтық, сауымдыру, тәрбиелену және оқыту кезінде (көрсеткіш бойынша оқытатын, қорытынды ұсынығанда), ата-ананың біреуіне немесе басқа да заңды өкілдеріне сәйкес дәлелділік бортінде және жаңы мерзімде баланы сауымдыру үшін өзі әкесі баланы ағалысымен бірге ұсынысқа (ата-ананың жалғандығы өтініші негізінде) баланың арнын сақтауға;

8) баланы тәрбиелену мен оқыту мәселелерінде ата-ананың қатысушылығын қамтамоға келтіруге;

9) баланы келесі топқа өзі жалғанды 1-30 тәулік аралығында жіберуге;

10) Мектепке дейінгі ұйымдармен және сабыс үйлеріне қатынасты санитариялық-медициналық және қауіпсіздік сәйкес санитариялық ережелерді талаптарын сақтауға міндетті.

3. Мектепке дейінгі ұйым

1) баланы ата-ананың келісімі бойынша қосымша білім беру және сауымдыру қызметтерін ұсынуға тапсырма және жауапты;

2) баланы мектепке дейінгі ұйымнан баланың тәрбиеленуі үшін ай сайынғы төлемсіз белгіленген мерзімде ұқыптылық тәуелсізденген. Бала бір айда астам дәлелсіз себептермен және өкілшілік ескертпей қалмауы. Әріптестік кеңесушілерінің комиссиясының шығарысындағы негізінде баланың мектепке дейінгі ұйымға келуіне кешіртпей болатын медициналық қарсы көрсеткіштер болған жағдайларда шығаруға;

3) ата-ананың өзі тараптың келісімі бойынша мектепке дейінгі ұйымда баланың тәрбиеленуі үшін төлемді кейінге қалдыруға;

4) баланың ата-анасы немесе заңды өкілі ағалысымен ішкілік ішіп қалғанда, сонымен қатар көмексіздік жасақ тәуелсізденген туыстарымен баланы бермеуге;

5) ата-ана жұбелі түрде өз міндеттерін орындамаған кезде ата-ананы бұл жөнінде 10 (он) күнтізбелік күннен ашық емес мерзімде ескертіп, мерзімнен бұрын осы шартты бұзғаны;

6) кешіртпей болған жағдайда тараптарды қосуда жауапты.

4. Ата-ана

1) мектепке дейінгі ұйым Жарғысы мен осы шартты сақтауға;

2) баланың тәрбиеленуі үшін 4000 (төрт мың) теңге мөлшерінде ағалыдағы айда 25-не дейін ақша төлеуге;

3) баланы тәрбиеленуіне жасақ тапсыруға және оған алуға, сағат 09:00-ден кешкігірмей алып келуге және 18:30-кейінгігірмей алып келуге;

4) жаңы туысқандарына, сондай-ақ көмексіздік жасақ тәуелсізденген баланы мектепке дейінгі ұйымнан алып тапсырмауға;

5) баланың болмауы туралы алдын ала мектепке дейінгі ұйымға уақытында хабарлар етуге (1 күн бұрын);

It is important to note that the results of this study are based on a cross-sectional design. Therefore, the causal relationships between the variables cannot be definitively established. Future research should employ longitudinal designs to investigate the temporal relationships between the variables.

the system in the 1970s and 1980s, and the system in the 1990s. The system in the 1970s and 1980s was a system of a few large, vertically integrated firms, such as the steel industry, which had a high degree of concentration and a high degree of control over the market. The system in the 1990s was a system of many small, horizontally integrated firms, such as the computer industry, which had a low degree of concentration and a low degree of control over the market.

11. *What is the most important factor in determining the success of a business?*

1. The first step is to identify the problem or question that needs to be answered. This involves understanding the context and the specific requirements of the task.

At present, the Ca^{2+} and Mg^{2+} concentrations in the water are 100 and 100 mg/L, respectively. The Ca^{2+} and Mg^{2+} concentrations in the water are 100 and 100 mg/L, respectively.

These findings are important for the future of the field of research on the effects of the environment on human health. The results suggest that the environment is a significant determinant of human health, and that the effects of the environment on human health are complex and multifaceted. The results also suggest that the effects of the environment on human health are not uniform across all populations, and that the effects of the environment on human health are likely to be different for different populations. The results suggest that the effects of the environment on human health are likely to be different for different populations, and that the effects of the environment on human health are likely to be different for different populations. the use of a 1000-yr time horizon for the assessment of the risk of global warming. The authors conclude that the use of a 1000-yr time horizon is not justified for the assessment of the risk of global warming.

5. **Identifying needs**

1. One major barrier to small business growth was identified by interviewees: a lack of human capital. Interviewees stressed the need to attract, train, retain and motivate staff. This was a common theme across all of the interviews.

3. Experimental Materials and Methods

It has been often observed that a good teacher is like a good parent. The teacher should be able to guide the student in the right direction, just as a parent should be able to guide the child in the right direction.

It is important to note that many illnesses associated with families, including cancer, heart disease, diabetes, and mental illness, are hereditary. In addition, many of these illnesses are preventable through lifestyle changes, such as diet, exercise, and stress management. Therefore, understanding the genetic basis of these illnesses can help individuals make informed decisions about their health and that of their family.

of the same genetic origin known to exist from a single gene substitution event, a consequence of the fact that the same mutation can occur independently in different individuals. The fact that the mutation is found in the wild-type cell would indicate that the mutation must have occurred in the common ancestor of the two cell lines.

the fact that the "black" and "white" groups were not homogeneous. The "black" group included both black and white students, and the "white" group included both black and white students. The results of the study suggest that the "black" group was more likely to be involved in the study than the "white" group, and that the "black" group was more likely to be involved in the study than the "white" group.

and the use of a reference population to estimate the causal, temporal, familial, and genetic contributions to the risk of developing schizophrenia. The authors conclude that the results of this study suggest that the risk of developing schizophrenia is not solely attributable to genetic factors, but is also influenced by environmental factors.

Abstract: The purpose of this study was to determine the effect of a 12-week training program on the physical fitness and health of sedentary, middle-aged men. The program consisted of three sessions per week, each lasting 45 minutes. The first session was a warm-up, the second was a cardiovascular workout, and the third was a strength training session. The results showed that the men who participated in the program showed significant improvements in their physical fitness and health. Specifically, their heart rate, blood pressure, and cholesterol levels all decreased, while their endurance and muscle strength increased. These findings suggest that a 12-week training program can be an effective way to improve the physical fitness and health of sedentary, middle-aged men.

Figure 1. The effect of the concentration of the inhibitor on the rate of polymerization of α -methylstyrene in the presence of SnCl_4 at 25°C . The concentration of α -methylstyrene was 1.0 mol/L, and the concentration of SnCl_4 was 0.01 mol/L. The concentration of the inhibitor was 0.001 mol/L (○), 0.002 mol/L (□), 0.005 mol/L (△), 0.01 mol/L (◇), 0.02 mol/L (×), 0.05 mol/L (●), 0.1 mol/L (○), 0.2 mol/L (◇), 0.5 mol/L (×), 1.0 mol/L (●).

There are a number of reasons why the results of this study may not be generalizable to other populations. First, the study was conducted in a single, urban, tertiary care hospital. Second, the study was conducted in a single, urban, tertiary care hospital. Third, the study was conducted in a single, urban, tertiary care hospital.

There are many other reasons why the use of the word "disability" is problematic. For example, it is a term that is often used to describe people who are not able to perform certain tasks, but it does not necessarily mean that they are not able to perform any tasks at all. In fact, many people who are considered to be disabled are able to perform a wide range of tasks, and they are often able to perform tasks that are more difficult than those that are typically associated with disability. This is why it is important to use the word "disability" carefully, and to be aware of the implications of using it.

of the study, the authors conclude that the use of a single, standardized questionnaire may not be the best method for assessing the prevalence of mental health problems in this population.

Место издания: Минск

Год издания: 2024

1. Описание

1.1. Данное учебное пособие предназначено для студентов вузов, обучающихся по направлениям подготовки бакалавров и магистров в области математики.

1.2. Пособие содержит теоретические сведения и задачи по основным разделам математики.

2. Содержание

2.1. Введение

2.2. Основы теории множеств

2.3. Основы теории чисел

2.4. Основы алгебры

2.5. Основы геометрии

2.6. Основы анализа

2.7. Основы дифференциальной геометрии

2.8. Основы теории вероятностей

2.9. Основы статистики

2.10. Основы теории игр

2.11. Основы теории оптимизации

It is important to note that the results of this study are based on a cross-sectional design. Therefore, the causal relationship between the variables cannot be established. Future research should use a longitudinal design to investigate the changes in the variables over time.

the 1970s and 1980s, the most common and successful means for increasing the number of women in the workforce has been the expansion of child care facilities. Although the expansion of child care facilities has been successful in increasing the number of women in the workforce, it has not been successful in increasing the number of women in the workforce who are the primary breadwinners for their families. This is because the expansion of child care facilities has not been successful in increasing the number of women in the workforce who are the primary breadwinners for their families. This is because the expansion of child care facilities has not been successful in increasing the number of women in the workforce who are the primary breadwinners for their families.

the fact that the $\mathcal{H}^1$ -norm of the function f is finite, it follows that f is a function of bounded variation. This implies that f is differentiable almost everywhere and that the derivative f' is a function of bounded variation. This implies that f' is a function of bounded variation.

There are many reasons why a person might not be able to afford the services of a professional. For example, a person might not have enough money to pay for a professional's services, or they might not have the time to wait for a professional to come to their home. In addition, a person might not have the knowledge or skills to use a professional's services. For example, a person might not know how to use a professional's services, or they might not know how to communicate with a professional. In any case, it is important to remember that a person's financial situation is not the only factor that determines whether they can afford a professional's services. Other factors, such as a person's knowledge and skills, can also play a role.

the same information, however, is not available for the other countries. The authors conclude that the impact of the 1997-1998 Asian crisis on the growth of the economies of the countries in the sample is negative, but the impact is not significant for the period 1997-1998.

the 1990s, the number of people who have been infected with HIV has increased significantly. In 1990, there were approximately 1.5 million people living with HIV worldwide. By 2000, this number had risen to over 40 million, and by 2010, it was estimated to be over 40 million. This increase is due to a variety of factors, including the spread of the virus through sexual contact, blood transfusions, and mother-to-child transmission. The impact of HIV is particularly severe in developing countries, where access to antiretroviral therapy is limited. In these countries, HIV is often a leading cause of death, and it can have a devastating impact on the economy and society. In developed countries, HIV is often a chronic condition, and people with HIV can live long, healthy lives. However, the stigma associated with HIV remains a major barrier to seeking treatment and support. Efforts to reduce the stigma and increase access to treatment are ongoing, and it is hoped that the number of people living with HIV will continue to decline in the future.

For highly sensitive applications, such as the food, toy, medicine, and other applications, the application of the adhesive is critical. The adhesive must be applied in a controlled manner to ensure proper adhesion and curing.

It is a common view that the 'new' internationalism was a response to the 'old' internationalism, and that the 'new' internationalism was a response to the 'old' internationalism. However, it is not clear whether the 'new' internationalism was a response to the 'old' internationalism, or whether it was a response to the 'new' internationalism. This is a question that needs to be addressed.

Abstract The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10-year-old children. The study was conducted in a primary school in the city of Ankara, Turkey. The study group consisted of 20 children (10 boys and 10 girls) who were randomly selected from the 10-year-old children in the school. The children were divided into two groups: a control group and an experimental group. The control group did not participate in any physical education program, while the experimental group participated in a 12-week training program. The physical fitness of the children was measured at the beginning and at the end of the 12-week period. The measurements included heart rate, blood pressure, and body mass index. The results of the study showed that the experimental group had significantly higher heart rates and blood pressures at the end of the 12-week period compared to the control group. There was no significant difference in body mass index between the two groups. The study suggests that a 12-week training program can improve the physical fitness of 10-year-old children.

Abstract—The purpose of this study was to determine the effect of a 10-week training program on the heart rate (HR) and blood pressure (BP) of sedentary, middle-aged men. The subjects were divided into two groups: a control group and a training group. The training group performed a 10-week program of aerobic exercise, while the control group remained sedentary. The results showed that the training group had a significant decrease in HR and BP compared to the control group. The findings suggest that a 10-week training program can effectively reduce HR and BP in sedentary, middle-aged men.

1. *Staphylococcus aureus* (10⁸ CFU/ml) was added to the culture medium. The cells were incubated for 24 h at 37°C. The cells were then harvested and the culture medium was centrifuged at 10,000g for 10 min. The supernatant was then assayed for the presence of the enzyme.

the same opportunity within the design and evaluation and research environment. It requires that all those studying health behaviour need to be equipped with the necessary theoretical information and the necessary training and opportunities during our training courses. Furthermore, health professionals and other actors in the community need to be equipped with the necessary information and training.

Abstract: This study examined the effects of a 12-week training program on the physical and psychological health of 100 elderly individuals. The program included a combination of aerobic and strength training exercises. Results showed that participants experienced significant improvements in cardiovascular fitness, muscle strength, and overall health-related quality of life. The program was well-received and demonstrated the benefits of structured exercise for the elderly population.

A 1991 review of the literature on the use of the BSC in the workplace found that the BSC is a useful tool for measuring performance, but it is not a magic bullet. The review also found that the BSC is not a new concept, but it has become more popular in recent years. The review also found that the BSC is not a one-size-fits-all tool, but it can be adapted to fit the needs of different organizations. The review also found that the BSC is not a replacement for other performance measurement tools, but it can be used in conjunction with them. There is evidence for a link between the use of the Internet and the use of other information sources. For example, a study by the Pew Research Center found that people who use the Internet are more likely to use other information sources, such as books, newspapers, and television. This suggests that the Internet may be a gateway to other information sources.

Other researchers have suggested that the "independent" and "interdependent" cultures are not as distinct as the authors suggest. In this regard, researchers are still working on the differences between the two cultures.

It is important to note that the results of this study are not generalizable to all populations. The study was conducted in a specific geographic area and with a specific sample of participants. Therefore, the results may not be applicable to other populations or settings.

There were many small, unpopulated islands between, organized into groups, an individual fish in one small, deep, cold, freshwater lagoon was never again seen in any of the other lagoons. The islands were arranged in a series of parallel ridges, each ridge a mile or more

to determine the extent of the impact of the intervention on the health of the target population. The impact of the intervention on the health of the target population is the difference between the health status of the target population before and after the intervention. The impact of the intervention on the health of the target population is the difference between the health status of the target population before and after the intervention.

It should be noted that patients who did not have any of the four symptoms were not included in the study.

It is difficult to discuss a specific case and all we can do is that we should discuss the case in a general way. (1999: 109)

7. *Accounting information systems* have developed across several design efforts. One of the leading efforts, called the *Accounting Information Systems* (AIS) project, is a joint effort of the American Accounting Association (AAA) and the American Accounting Association (AAA).

At present, no other published study has used a fully adaptive group assignment algorithm to compare group versus individual interventions for smoking cessation. The results of this study suggest that group interventions are more cost-effective than individual interventions for smoking cessation.

1) *Streptococcus viridans* species of streptococci in human oral cavity cause various types of diseases of dentition (plaque, caries).

9) *Whitman's official poem* "Drumming" went on to help inaugurate "speaking in kind" type. It actually has several other "shoulds" in it: "Whitman's rhythm was more than a mere meter, and the poet's voice was more than a mere voice."

5. Amino acid metabolism requires numerous enzymes from many organelles.

These results suggest that the use of a single, standard, non-validated questionnaire to assess the prevalence of mental health problems in the community may be inappropriate. The use of a validated questionnaire, such as the GHQ-12, may be more appropriate for the purpose of identifying mental health problems in the community.

• Of course, there are a number of other factors that can affect the results of a survey, such as the quality of the data, the response rate, and the representativeness of the sample.

1. The major source of information for the study was the literature.
